WAKOL Sealing Compounds for Food Packaging – Minimize risks in your compliance work

Regulatory environment grows more complex and increasingly important

The regulatory environment for food packaging material has grown increasingly complex over the past years and continues to do so with uninhibited speed. Apart from well-established industry standards to guide compliance on European and FDA level, stakeholders have to keep up with new regulatory topics concerning sealing compound products with potential broad impact. For example, the assessment of non-intentionally added substances (NIAS) will more and more have to be a part of routine compliance considerations. In other instances, groups of substances like mineral oil derived hydrocarbons or individual starting materials like styrene have come under intensified legislative or retail market related scrutiny.

Already existing solutions for upcoming challenges

WAKOL's technical team is keeping an eye on all of these developments. Our longstanding experience in formulation of sealing compounds has led to developments of product solutions, which can assist you to minimize risks in your compliance work. We have products with proven market performance which cover all of today's regulatory "hot topics". There are solutions for:

1. Products without usage of mineral oil based plasticizers or film formation aids (no MOSH/MOAH)
2. Products with very low extraction profile and low occurrence of NIAS
3. Styrene free formulated compounds - EVA based sealing compounds are only available from WAKOL on the market

Contact Wakol how you can benefit from our experience

Be prepared for the ever more challenging future of managing compliance issues with Sealing Compound products from WAKOL. Contact your WAKOL representative to learn more about possibilities to benefit for your compliance work and risk management!

All WAKOL Sealing Compounds with advanced technology⁺⁺ are proactively designed even to meet tomorrow's regulatory challenges. These are products

1. without usage of mineral oil based plasticizers or film formation aids (no MOSH/MOAH)
2. with very low extraction profile and low occurrence of NIAS
3. styrene free formulated

All WAKOL Sealing Compounds with advanced technology⁺ are proactively designed for upcoming regulatory challenges. These are products

1. without usage of mineral oil based plasticizers or film formation aids (no MOSH/MOAH)
